Please note the following:

- A contact is a template consisting of an email, name, and street address.
- When you populate a domain with Whois data, you create or choose a contact and assign it to the domain.
- You can assign individual contacts to each domain or use a single contact for multiple domains.
- If you make changes to a contact that is assigned to multiple domains, those changes will apply to all domains associated with that contact.
- Each contact has a unique identifier called "contact-id" or 'handle'. Examples include "CCOM-12345" for .com domains or "CODE-12345" for .de domains.
