Creating and Modifying Your Own Nameservers
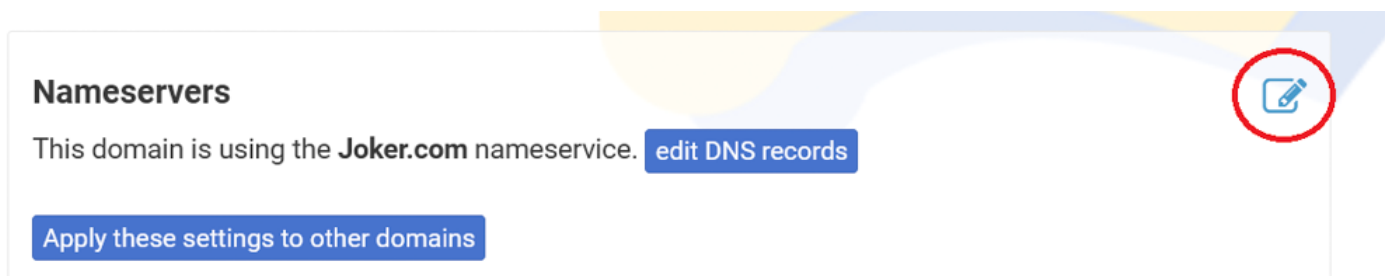

If you prefer not to use the free Joker.com name service and instead want to use your own nameservers, you need to "register" it.

> **Please note:** Creating nameservers (e.g., registering a hostname with an IP address to define a nameserver) **only works** with Joker.com if the domain used for these nameservers is **also a Joker.com domain**. This limitation is based on technical/registry constraints.

If you intend to use a domain from another registrar, only that registrar will be able to register the nameservers with the registry.

To register your own nameservers, please follow these steps:

1. Under Domain Management, click on the edit icon in the "Nameservers" section:

2. Click on "register NS":

Nameserver settings for the domain *example101.eu*

Important: A domain must have at least two (2) nameservers - otherwise, depending on the type of domain, it could happen that the registry automatically locks the domain.

JOKER.COM Nameservice is configured.

Use custom nameservers

« back

Register nameservers

If you need another nameserver in the list of your own or foreign **custom** nameservers, please register it.

register NS

Please note:

It is **not** possible to mix both Joker.com nameservers and other nameservers. That means you have to choose either all Joker.com nameservers, or at least 2 of your foreign or own custom registered ones!

3. Enter NS name:

Register Nameservers ❓

If you **do not** want to use Joker.com's nameservers, but your own or foreign ones, these nameservers have to be registered with the registry system at first.
This only applies to nameservers using a domain name which is also registered with Joker.com, and has not been registered before.
This nameserver registration is done in two simple steps, you only need to provide the current IP addresses (IPv4 and/or IPv6) for these.

DNS Name: ns1.example101.eu

Please note

Nameservers, whose domain is **not registered** with Joker.com or not registered by **you** do not have to be registered here. You can simply use them by typing their names into the nameserver fields at 'Modify Domain'.

« back   proceed »

4. Enter IP-addresses and click "proceed":

Register Nameservers ⊙

Please enter one ore more IPv4 and/or IPv6 address(es) for your nameserver **ns1.example101.eu**.

IP Address: 123.12.1.1

Multiple IP-Addresses have to be separated with ";"

IPv6 Address: efc0::17

Multiple IP-Addresses have to be separated with ";"
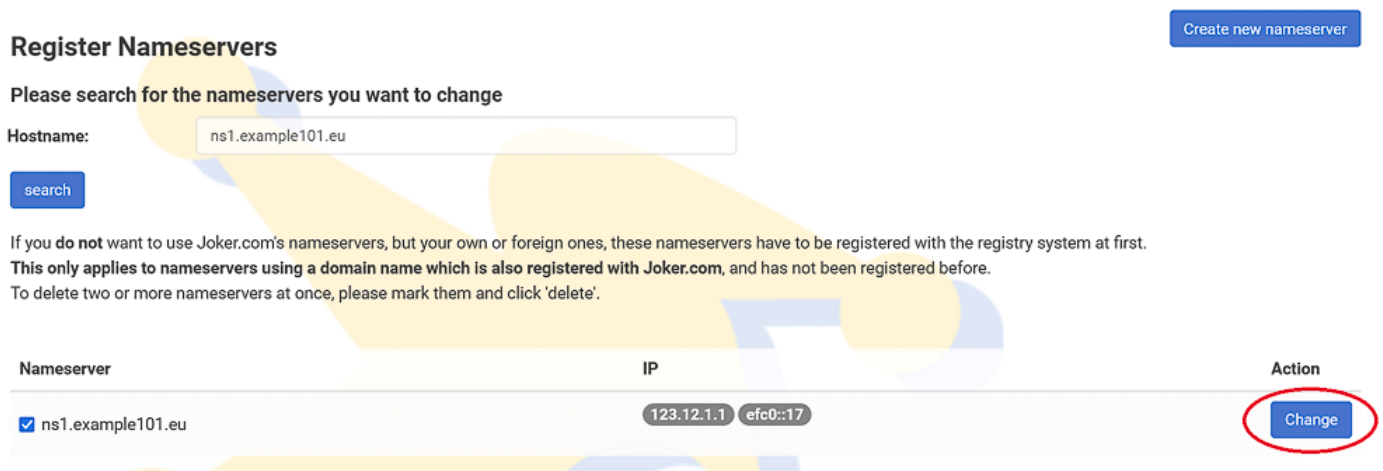

« back   proceed »

Modifying Your Own Nameservers

If you want to modify the Nameserver you have previously created, you need to follow these steps:

1. Choose "Nameservers" from the "My Joker" menu:

2. Search for the Nameserver you would like to modify, and click "Change":
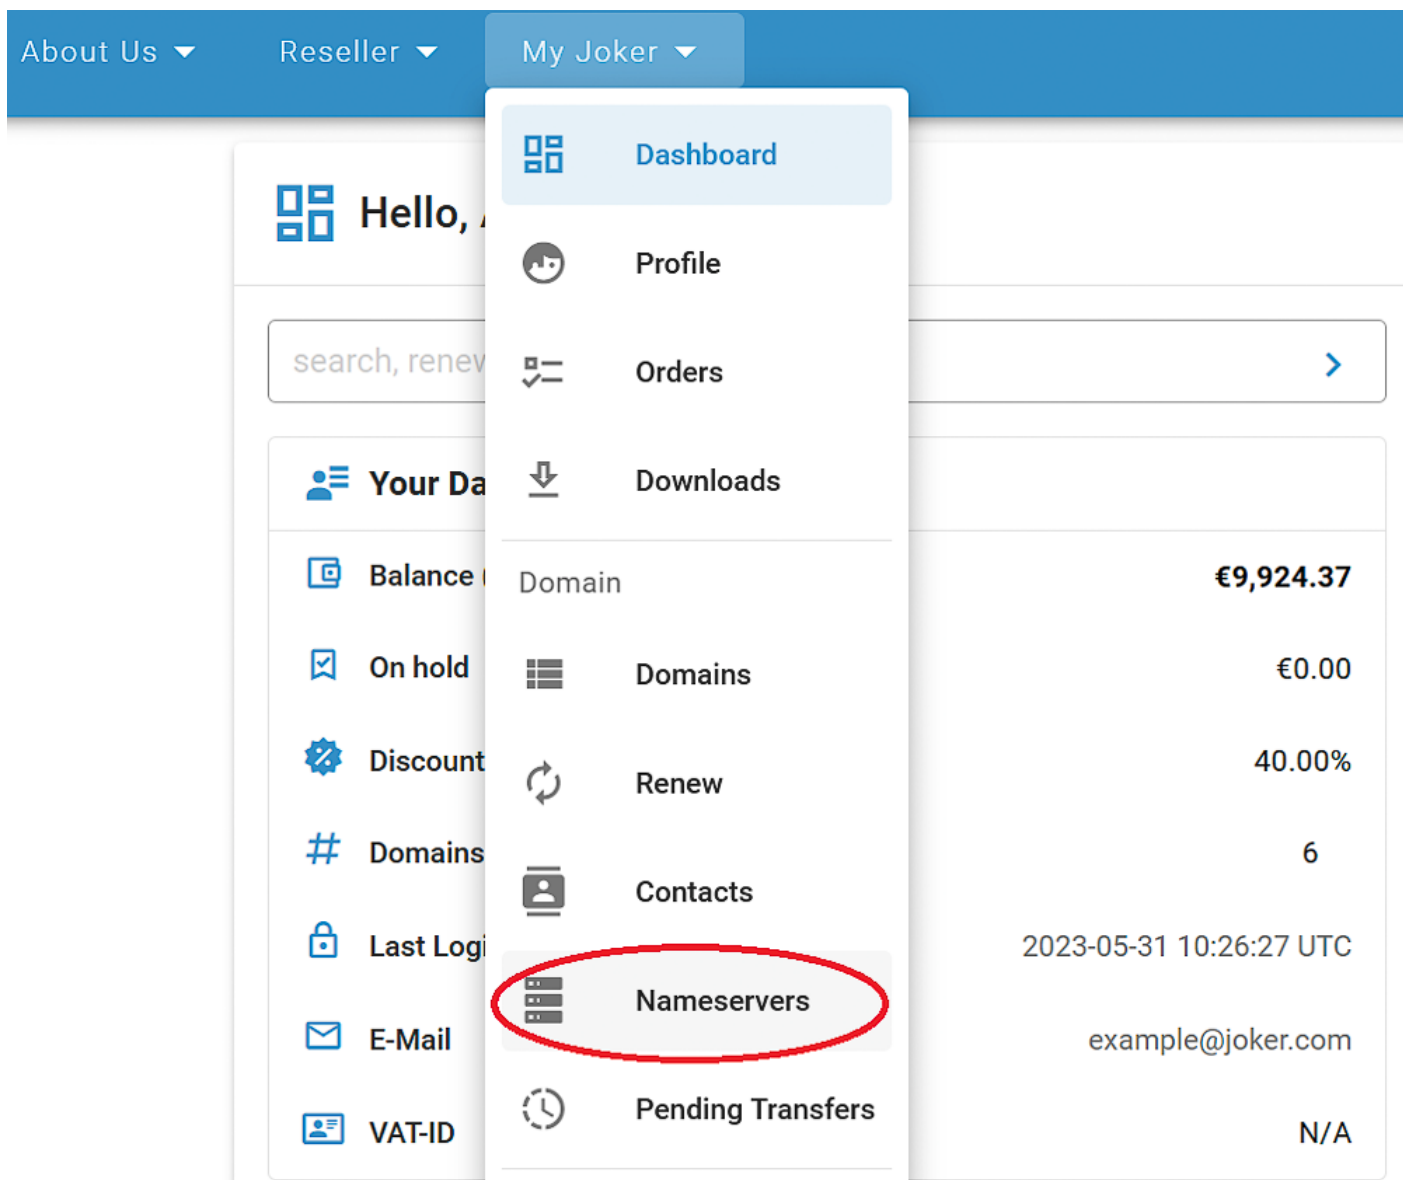

3. Make necessary changes, and click "Save":

After a successful change, you will receive a confirmation email.

Deleting Your Nameservers

If you want to delete one of your previously registered Nameservers, you can do this easily by following the steps below:

1. Choose "Nameservers" from the "My Joker" menu:

2. Search for the Nameserver you would like to delete, check it, and click "Delete marked DNS":

Register Nameservers

Please search for the nameservers you want to change

Hostname: ns1.example101.eu

search

If you **do not** want to use Joker.com's nameservers, but your own or foreign ones, these nameservers have to be registered with the registry system at first.
This only applies to nameservers using a domain name which is also registered with Joker.com, and has not been registered before.
To delete two or more nameservers at once, please mark them and click 'delete'.

Nameserver	IP	Action
☑ ns1.example101.eu	123.12.1.1 efc0::17	Change

delete marked DNS

Please note: Only Nameservers that are **not linked** to any domain (even if they are in the RGP) can be deleted. If the selected name server is still in use, it cannot be deleted.
