

The Joker.com PHP Client

Joker.com provides this tool as an fully working example of how to make use of the Joker.com API (DMAPI).

The **Joker PHP Client** is a lightweight web interface, demonstrating how to implement a full-featured domain handling.

The source code of this web interface is freely available for download on [Github](#), so that our resellers could run it on their own site! The API used in this tool is called DMAPI and it is a Joker.com domain registration system offered as Web service (**API**).

The Joker PHP Client is of course also provided as a hosted service by Joker.com, and can be reached as rcp.joker.com.

Please [try it out](#). Log in with your Joker.com reseller account, and operate carefully with it as it is completely functional. Your feedback as a reseller will be greatly appreciated and will help us to improve this application.

Requirements:

- Web server
- PHP 7.x
- Web browser

Summary:

Reseller Control Panel is destined to handle any domain operations which are offered by the domain registrar Joker.com.

Currently it can:

- show WHOIS of a domain
- register domains
- modify domains
- transfer domains
- renew domains
- delete domains
- lock/unlock domains (transfer related)
- initiate redemption procedure
- create, modify and delete contacts
- create, modify and delete nameservers
- zone operations
- IDN support

- show reseller information
- show sumamry of actions executed through the interface

Download:

You can get the newest version at <http://sourceforge.net/projects/joker-client/>.

Installation:

Please see Installation of Joker PHP Client, and there is also an INSTALL file in the distribution package.

Support:

You can contact us through our support area.
