TLD List and Assosiated Contact Prefixes

This table lists the prefixes used for contact handles, which define how names and address data are referenced for each TLD. A contact handle such as **CODO-8463533** represents an underlying domain contact record (e.g., “John Doe” and their associated details).

Because TLDs can migrate between providers, we recommend checking this page periodically to ensure the information is up to date.

TLD name	contact prefix
fr	COFR
africa	CAFR
accountant	CARI
