What is the so called 'Additional Whois Signature' for?

The "Additional Whois Signature" is part of the data asked during the registration as a Joker.com reseller.

Those input fields are optional, but if you provide them, they will be **used to publish your strings in global whois** for your domains.

This way your customers can **identify you as their domain provider**.

The strings you provide will be shown as "Sponsoring Reseller".

> **Please note:** You can provide or modify this data at any time in the Reseller's Area.
