Plugins & Interfaces

WHMCS Registrar Module

[WHMCS](#) is a popular web hosting and automation solution, which includes billing and support

options.

If you are using WHMCS for your hosting activities, you may interface Joker.com with WHMCS' domain functionality to easily order and manage domains from within WHMCS.

Joker.com maintains a registrar module for WHMCS, which offers a great load of features to interface Joker.com seamlessly from within WHMCS:

The following registrar core functionality is provided:

- register domains
- initiate transfers
- perform renewals

A screenshot of the WHMCS user interface for managing a domain named 'gnurz24.com'. The interface is in a client area, showing a navigation menu on the left with options like 'Manage', 'Addons', and 'Actions'. The main content area displays 'Managing gnurz24.com' and lists available add-ons: 'ID Protection' (with a 'Buy Now for \$0.00 USD' button), 'DNS Host Record Management' (with 'Manage' and 'Disable' buttons), and 'Email Forwarding' (with 'Manage' and 'Disable' buttons). The top of the page shows a navigation bar with 'Home', 'Services', 'Domains', 'Billing', 'Support', and 'Open Ticket', along with a user greeting 'Hello, Jan!' and a notification 'You are currently masquerading as a client. Logout & return to Admin Area'.

- allow viewing and changing of nameservers
- allow viewing and changing of WHOIS information of domains

Plugins & Interfaces

- usable with any TLD Joker.com offers

Additionally, also these features are provided:

- create/edit email forwards
- create/edit dns records for joker-ns
- fetch auth id ("EPP Code")
- sync of expiration date
- order whois privacy protection with domain registration, transfer and renewal
- switch easily between production and testing environment (OT&E)

New in version 1.0.4:

- use [API key](#) instead of user/password credentials
- maintain privacy settings for domains

New in version 1.1.0

- domain availability check
- own CRON job script, for registration status check

New in version 1.1.1

- fixed toggling of id protection

New in version 1.1.2

- fixed contact information change for WHMCS 7.x

New in version 1.1.3

- added account balance check for domain renewals

New in version 1.1.4

- added account balance check for domain transfers
- added a config option to enable automatic restore from redemption grace period if renew

Plugins & Interfaces

is not possible

New in version 1.1.5

- fix for .eu expiration date / redemption grace period problem

New in version 1.2.0

- added dnssec management

New in version 1.2.1

- fixed some issues with the domain availability check

New in version 1.2.2

- fixed an issue with .uk domain contacts

New in version 1.2.3

- fixed issue with puny code in the domain availability check

New in version 1.2.4

- fixed issue with domain synchronisation cron

This version has been tested with WHMCS 6.x and WHMCS 7.7.1

Installation:

Please extract the contents of the **below attached ZIP archive** into the folder

modules/registrars/joker/

Plugins & Interfaces

of your **WHMCS** installation.

The configuration of the Joker.com registrar module is done by using the **WHMCS admin section**. For this, please login as "admin" into your WHMCS installation, and navigate to

Setup -> Products/Services -> Domain Registrars

Pick "Joker.com" from the list, "Activate" the plugin, and enter your Joker.com Reseller's credentials - **the same you are using for DMAPI**.

You also may choose to use the "TestMode" for dry run on our OT&E platform, or to configure the free Joker.com nameservers as a default for new domains.

Once activated, you may always change these settings by clicking on "Configure". Don't forget to "Save Changes" after doing so.

Usage:

You will find most options for domains in section "**Clients -> Domain registrations**" - **click on the domain name** to see all domain details.

A special command there is "**Sync**" at the '**Registrar Commands**' - this will trigger a manual sync of a domain's status and expiration date with Joker.com, in case it was modified outside of WHMCS.

This is usually also done automatically by the '**WHMCS domainsync cron**' - please make sure that you added this with your WHMCS installation.

Please send us your feedback: reseller-support@joker.com

Enjoy!

Plugins & Interfaces

Simple WHMCS Plugin

[WHMCS](#) is a popular web hosting and automation solution, which includes billing and support options.

If you are using WHMCS for your hosting activities, you may interface Joker.com with WHMCS' domain functionality to easily order and manage domains from within WHMCS.

This is a very light weight and simple plugin, therefore very easy to install (you will find instructions in the readme of the zip archive below).

However, features are basic, and you have to configure a fixed set of contact handles for each TLD you want to use.

Any TLD of Joker.com should work.

This plugin is provided as an example to show, how easy it is to connect Joker.com to WHMCS using DMAPI. You may also use it as a starting point for your own experiments.

For a full integration of Joker.com into WHMCS, please use our official fully-featured Joker.com [WHMCS Registrar Module](#).
