

1.9 Nameservice

How to create a name server (-record)?

Create Name Servers and Records

If you do not want to use the free Joker.com name service, but a **custom name server**, you first have to "register" it. For this, please

1. visit "[My Domains](#)", choose the domain to add a nameserver to
2. click on '**Modify**', and then the edit icon  on section "**Nameservers**"
3. click on "**register NS**"

To **add non-Joker.com name servers to a domain**, please

1. visit "[My Domains](#)", choose the domain to add a nameserver to
2. click on '**Modify**', and then the edit icon  on section "**Nameservers**"
3. click on "**Use custom nameservers**"

To **add IP addresses, URL- or EMail-forwardings** or other DNS records to your **non-Joker.com external name servers**, please

- check what tools the **provider of your external name server** does provide

To **add IP addresses or other DNS records to Joker.com name servers**, please

- visit "[My Domains](#)"
- click on "DNS" of the relevant domain
- find more about [types of DNS records at Joker.com](#) and [how to configure name servers](#)

Please note: Creating name servers (e.g. registering a hostname with an ip address to define a

1.9 Nameservice

name server) does only work with Joker.com, if the domain used for these name servers also is a Joker.com domain.

This is a technical/registry-based limitation.

If a domain from another registrar should be used, only this other registrar is able to register the name servers with the registry.

Of course, just using external, **already existing** nameservers with any Joker.com domain is fine.
