

1.11 URL/Web Forward and -Redirect

What is URL Forwarding (Web Forwarding)?

URL Forwarding

This is a service provided by Joker.com, which allows to direct all **HTTP (web) requests** for a domain (or subdomain) registered with Joker.com to the **webpace** of a different, externally hosted domain, e.g. the webpace which is usually included in Internet provider contracts.

This feature enables you to access e.g. 'http://www.[your-domain].com', with the real content residing at 'http://www.[your-internet-service-provider].com/[your Account]'.

The redirection is of type 'HTTP/1.1 301 Moved Permanently'.

You can use a standard redirection, or a so-called "**frame-based**" redirection, which will **keep the original domain name** visible in your browser's location bar.

You are also able to provide your URL forwards with your own special title-, meta- or HTTP header tags.

To configure your URL forwarding, please visit the "**DNS**" menu in "[My Domains](#)" with the domain you want to add URL forwards to, click on "**+ New**" and select **URL-Forwarding** as Record-Type.

Please also consider [How to create a name server \(-record\)?](#)

Unique solution ID: #1112
