

1.12 Domain Contacts

How to delete a contact?

Delete a Domain Contact

Contacts can only be deleted **if they are not used with any other domain**. Joker.com is automatically taking care of this, so it is safe to try to delete a 'supposed-to-be-unused' contact. If it is yet in use, it will **not** be deleted.

To delete a contact, please visit "[My Contacts](#)".
You will get a list of all your contacts, searching is possible as well.

Please mark the items you want to delete using the checkbox, and click on "**Delete all selected**" below.

Please note, that **modifying** a contact which is linked to one of your domains is also possible by accessing '**Modify**' in '[My Domains](#)'.

Please also consider reading [What are 'contacts'?](#)
