

Domains

domain-get-property

Requires

<i>domain</i>	domain name
<i>pname</i>	property name (same as in domain-set-property)

With this request you can query the value of a specific property set for a domain.

It returns a single line, which looks like:

```
autorenew: 0
```

Example:

```
https://dmapl.joker.com/request/domain-get-property?domain=example.com&pname=autorenew&auth-sid=<your-current-session-id>
```
