What is an 'Expiring Domain'?

Expired Domains

[Expiring Domains](#) are domains which are already registered with Joker.com, but which have **not been renewed** by the former owner. You may [purchase](#) them right before they are deleted - once they are deleted, they may be gone for ever.

Expiring domains are not 'weighted' by value, we offer them all for the same regular [RGP](#) price, which is determined by the registry.

As with the [Restore Procedure](#), the price consists of the regular RGP fee, plus the price for a regular renewal for one year.

That's why you really may [make a snatch here](#).

Please find out more about [expired and premium domains](#).
