

Macros

.name Contacts

new-handle (typical creation of a new contact)

This means the definition of a new contact. If a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format CNAM-number, e.g. CNAM-173259.

ATTENTION

The name of the request field depends on the contact. If you want to create a contact for the owner-contact, you have to replace the "." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the "." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the "." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the "." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory. If you do not provide the **name** and **name**. You have to provide the request field **name**. If **name** and **name** are not found. This is very important for the whole output. Everyone a **full person** is shown. If you are using the request field **name**, the whole is showing the value for **name**, regardless the content of the request fields **name** and **name**. If you do not provide the request field **name** but you are providing the request fields **name** and **name**, the whole is showing the concatenation of these fields.

There is also a new request field called **address** within the contact definition. This field is not mandatory. It is simply the 3rd line of the address.

name	DESCRIPTION	URL

An existing contact (@namecontact or @name-@) (name only)

This means an existing contact handle in the JOKER DATABASE.

Example:

```
owner-contact-handle:CNMAM-171209  
admin-contact-handle:CNMAM-171209  
tech-contact-handle:CNMAM-171209  
billing-contact-handle:CNMAM-171209
```

If clear you have entered a non-existing contact handle, the system will send you an error.

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

```
admin-contact-handle:same-as-owner-contact
```

```
tech-contact-handle:same-as-admin-contact
```

```
billing-contact-handle:same-as-tech-contact
```

The @name-@ makes always replace the value for the specified contact handle with the email address of the macrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for @name requests the contact handles for @com/@net/@country are not allowed. If you are referencing to a shortcut like @name.net@1, you will get an error.
