

Macros .me Contacts

new-handle (explicit creation of a new contact)

This means the definition of a new contact. If a contact with the provided email address exists in the JOKER-DATABASE, a new contact will be created. The reference for the created handle is following the format CCME-number, e.g. CCME-19228.

ATTENTION

The name of the request field depends on the contact. If you want to create a contact for the owner-contact, you have to replace the "." at the beginning of the fieldname with "owner-contact".

If you want to create a contact for the admin-contact, you have to replace the "." at the beginning of the fieldname with "admin-contact".

If you want to create a contact for the tech-contact, you have to replace the "." at the beginning of the fieldname with "tech-contact".

If you want to create a contact for the billing-contact, you have to replace the "." at the beginning of the fieldname with "billing-contact".

There is a new request field called **name** within the contact definition. This field is mandatory. If you do not provide the **first-name**, You have to provide the request field **name**, if **first-name** and **last-name** are not found. This is very important for the whole output. Everywhere a field **person** is shown. If you are using the request field **name**, the whole is showing the value for **name**, regardless the content of the request fields **first-name** and **last-name**. If you do not provide the request field **name** but you are providing the request fields **first-name** and **last-name**, the whole is showing the concatenation of these fields.

There is also a new request field called **address-3** within the contact definition. This field is not mandatory. It is simply the 3rd line of the address.

request field	request value	response
new-handle	19	19
name	CCME-19228	CCME-19228
name	CCME-19228	CCME-19228
name	CCME-19228	CCME-19228
name	CCME-19228	CCME-19228
name	CCME-19228	CCME-19228
first-name	CCME-19228	CCME-19228
last-name	CCME-19228	CCME-19228
address-1	CCME-19228	CCME-19228
address-2	CCME-19228	CCME-19228
address-3	CCME-19228	CCME-19228
street-code	CCME-19228	CCME-19228
city	CCME-19228	CCME-19228
state	CCME-19228	CCME-19228
country	CCME-19228	CCME-19228
phone	CCME-19228	CCME-19228
email	CCME-19228	CCME-19228

Macros

An existing contact (@mecontact) or @name-ns ([me-ns])

This means an existing contact handle in the JOKER DATABASE.

Example:

```
admin-contact-handle.COME: 112225
admin-contact-handle.COME: 112225
bill-contact-handle.COME: 112225
bill-contact-handle.COME: 112225
```

In case you have entered a non-existing contact handle, the system will send you an error!

It is also possible to set a reference to a contact definition, which has been made earlier within the current request. To do so, please use the following syntax:

```
admin-contact-handle.name-as-owner-contact
```

```
bill-contact-handle.name-as-admin-contact
```

```
bill-contact-handle.name-as-tech-contact
```

The @name-ns makes always replace the value for the specified contact handle with the email address of the macrotarget. If the referenced contact has to be created with this request, it takes the result handle.

Keep in mind that for @me requests the contact handles for [com|net|org|info|biz|edu] contacts are not allowed. If you are referencing to a shortcut like here@joker.com, you will get an error.
