

Plugins & Interfaces

WHMCS Registrar Module

[WHMCS](#) is a popular web hosting and automation solution, which includes billing and support

options.

If you are using WHMCS for your hosting activities, you may interface Joker.com with WHMCS' domain functionality to easily order and manage domains from within WHMCS.

Joker.com maintains a registrar module for WHMCS, which offers a great load of features to interface Joker.com seamlessly from within WHMCS:

The following registrar core functionality is provided:

- register domains
- initiate transfers
- perform renewals

A screenshot of the WHMCS Registrar Module interface. The page title is "Managing gnurz24.com". The left sidebar shows a "Manage" menu with options like Overview, Auto Renew, Nameservers, Registrar Lock, Addons, Contact Information, Private Nameservers, DNS Management, Email Forwarding, and EPP Code. Below the menu is an "Actions" section with buttons for Renew, Register a New Domain, and Transfer in a Domain. The main content area shows "Addons" available for the domain, including ID Protection (Buy Now for \$0.00 USD), DNS Host Record Management (Manage/Disable), and Email Forwarding (Manage/Disable). The page is powered by WHMCompleteSolution.

- allow viewing and changing of nameservers
- allow viewing and changing of WHOIS information of domains
- usable with any TLD Joker.com offers

Plugins & Interfaces

Additionally, also these features are provided:

- create/edit email forwards
- create/edit dns records for joker-ns
- fetch auth id ("EPP Code")
- sync of expiration date
- order whois privacy protection with domain registration, transfer and renewal
- switch easily between production and testing environment (OT&E)

New in version 1.0.4:

- use [API key](#) instead of user/password credentials
- maintain privacy settings for domains

New in version 1.1.0

- domain availability check
- own CRON job script, for registration status check

- fixed issue with puny code in the domain availability check

New in version 1.2.4

- fixed issue with domain synchronisation cron

This version has been tested with WHMCS 6.x and WHMCS 7.7.1

Installation:

Please extract the contents of the **below attached ZIP archive** into the folder

modules/registrars/joker/

Plugins & Interfaces

of your **WHMCS** installation.

The configuration of the Joker.com registrar module is done by using the **WHMCS admin section**. For this, please login as "admin" into your WHMCS installation, and navigate to

Setup -> Products/Services -> Domain Registrars

Pick "Joker.com" from the list, "Activate" the plugin, and enter your Joker.com Reseller's credentials - **the same you are using for DMAPI**.

You also may choose to use the "TestMode" for dry run on our OT&E platform, or to configure the free Joker.com nameservers as a default for new domains.

Once activated, you may always change these settings by clicking on "Configure". Don't forget to "Save Changes" after doing so.

Usage:

You will find most options for domains in section "**Clients -> Domain registrations**" - **click on the domain name** to see all domain details.

A special command there is "**Sync**" at the '**Registrar Commands**' - this will trigger a manual sync of a domain's status and expiration date with Joker.com, in case it was modified outside of WHMCS.

This is usually also done automatically by the '**WHMCS domainsync cron**' - please make sure that you added this with your WHMCS installation.

Please send us your feedback: reseller-support@joker.com

Enjoy!
